

AR Electric Field — Cube AR

Stick these five markers on five faces of a small box (top + four sides; leave the bottom). The charge sits at the cube centre. Build a + cube with faces 0–4 and a – cube with faces 5–9; lay the gun cards flat beside them. Open Cube AR, tap Start camera, and walk around the 3-D field.

Tip. Print at 100% / actual size and confirm a face against the scale bar. Calibrate the centre with ?cube= ($\frac{1}{2}$ edge $\div$ marker width).
