

Parallel plates — a capacitor

A + and a – plate facing each other give a nearly uniform field between them, with fringing at the edges. Each plate carries $2 \times$ a point charge.

How to use. Print at 100% / actual size — each black pattern should measure 5 cm against the scale bar. Cut along the dashed lines, keeping the white border around every code. Lay the cards flat, open Plane AR in Safari and tap Start camera; tap Re-scan for a new layout.
