

AR Electric Field — Plane AR

Every Plane AR sticker is below. Cut out the ones an experiment needs, lay them flat on a desk, open Plane AR in Safari and tap Start camera. The layout auto-locks: each point charge floats above its sticker and a true 3-D field is drawn around it — no 3-D printer needed. Walk around to view it; tap Re-scan for a new layout.

Tip. Print at 100% / actual size and check a sticker against the scale bar. The Plane and Cube schemes reuse the same barcodes, so run one at a time. Tune with ?lift= (charge height), ?plateq=, ?gundir=.
